

## Sharebot J-3D at Vicenzaoro

23.01.2015

Nibionno (Lecco) - Today starts [VICENZAORO](#), one of the main international events dedicated to the goldsmith's art held at Fiera di Vicenza starting on January 23<sup>rd</sup> to 28<sup>th</sup>. Sharebot will be present with its new Sharebot J-3D, acronym of Sharebot Jewelry 3D, a DLP technology 3D printer developed with Mario Di Mario Spa.

### Sharebot J-3D

Sharebot Jewelry 3D is a 3D printer that creates an object with the exposure of a resin (inserted in a specific drip tray) to the UV rays. This method allows to generate objects with high definition and precision.

J-3D has been developed by the Sharebot R&D department in collaboration with the Mario Di Maio Spa firm, which has more than 90 years of experience in the world of goldsmith's art tool production.

The partnership allows us to create a very specific 3D printer dedicated to this particular field. An innovative and state-of-the-art tool that can satisfy the requests made in this sector.

The machine will be marketed by Di Maio Spa in a personalized version (as you can see in the picture above). With their experience and knowledge they will help every jewelry maker who wants to improve his work with the 3D printing technology.

## **Mario Di Maio SPA**

Sharebot will be present at VICENZAORO thanks to the partnership with [Mario Di Maio Spa](#).

Mario Di Maio is worldwide regarded as leader company on its markets. This is due to the proposal of high quality products, and innovating technical solutions, thank to a team of engineers and designers, beside the experience acquired through its many years activity.

International patents awarded in Europe and United States.

VICENZAORO  January

## **Vicenzaoro**

VICENZAORO is the main international faire dedicated to the goldsmith's art and it's been held at Fiera di Vicenza from January 23<sup>rd</sup> to 28<sup>th</sup>.

This year the exposition offer a new innovative role: VICENZAORO The Boutique Show shows itself as a true Jewellery City, with an original organization of the product display: creating homogeneous communities of clearly recognizable companies based on reference values, positioning, organization systems, types of production and overall image.

The division into 6 Communities provides a comprehensive overview of the exhibition's offer, trends and global market. Buyers and purchasing groups are facilitated in identifying the most appropriate target companies, in line with their positioning, thus optimizing and simplifying business.

Sharebot has the great honor to participate to such an important event, a symbol of the Made in Italy excellence so that even an innovative world like the goldsmith's art could know the advantages that 3D printing could offer.

## **Who we are**

[Sharebot](#) è is a young firm focused on the realization of 3D printers, an innovative start-up with the goal to produce and develop new technology for the 3D printing world. The mission is to be able to create new and ready-to-use 3D printers. In a short time the firm has become a leader in Italy and one of the main European manufacturers.
