

## **Pico, new Sharebot NG distributor**

Nibionno (Lecco) – 13.07.2015

Sharebot and Pico, a distributor specialised in information technology, solutions and services for small, medium and large companies such as schools, public institutions and professionals, signed an agreement to distribute Sharebot NG 3D printers in many of its Pico stores.

The undertaking was set up with the help of Esprinet, Italy's foremost supplier of consumer electronics. This will enable many people to discover what 3D printing can offer to their workflow. The next phase for this technology is to bring it to the masses: this new partnership is a fundamental part of this process.

### **Sharebot Next Generation**

Sharebot NG is one of the most common 3D printers in Italy. A robust working tool, its ease of use makes it ideal for professionals or amateurs alike. Sharebot also organizes 3D printing courses to teach users the correct usage of the machine .

The courses have been divided in two parts: a basic course, dedicated to those exploring the technology and features for the first time; and an advanced one aimed at those who already know how to print and want to improve their skills.

The printer can extrude a wide range of filaments: from the most common PLA and ABS (Sharebot has its own formulation of these materials, called PLA-S and ABS-HF, developed by its R&D department) to a special elastic filament, TPU.

Recently the company added two more high quality, technical and professional materials: Nylforce 550 and Nylon-Carbon, ideal for industrial use.

## **Distribution**

Over the next few days Pico will start to select which resellers will have Sharebot NGs in their stores.

In September the companies will hold a series of demo events and live presentation where the printer will be shown in action to give more understand about how a 3D printer works. Alongside these events, Pico will organize different workshop on 3D modeling.

The “demo unit program” will allow the purchase of the actual demo unit used at each event at a highly competitive price. It will be possible to take part in education courses and discover the technology’s secrets.

Every Pico's customer has access to the crown jewels of the company - technical support from the Sharebot assistance service. The highly qualified personnel offer all customers the needed support to improve their prints, solving any problem they could have. The company prides itself on being able to offer the best service to improve its users’ printing process.

## **Who we are**

[Sharebot](#) is a young firm focused on the realization of 3D printers, an innovative start-up with the goal of producing and developing new technology for the 3D printing world. The mission is to be able to create new and ready-to-use 3D printers. The company has more than 60 resellers in more than 10 European countries and wants to offer the best working tools to small and medium-sized enterprises.

[PICO](#) is a distributor specialised in information technology, solutions and services for small, medium and large companies such as schools, public institutions and professionals. Resellers, VAR, System Integrators, Software Houses and e-Tailers are the company main customers to whom Pico offers high quality products and a wide range of custom services with a specialization in the education and enterprise fields. Pico mainly works in the world of digital communication (print, web and video), developing apps, IT security, web collaboration and data management.
