

For more than 50 years, Deantolica spa provides the Italian prosthodontic market with the most innovative solution in this sector, both on national and international market. Deantolica is keeping a close watch on the evolutions of the sector and for this reason, in the 2014, it created the new division Big Equipment with the aim of developing an original and complete solution, completely integrated in the 3d world. Today, the studies require not only high quality equipments but also complete solutions wide-ranging which can give resolving answers from A to Z, available immediatly to everyone

The revolutionary solution is not long in coming: scan, planning, take dental impression, project, 3d print and dedicated surgical kit. Whatever is the experience of the specialist, our system can offer the right answer. The main characteristics are the completeness and interactivity of the system which allows the development of the guided surgery in-house and the possibility to create directly in the laboratory the provisional tooth: here our history meets Sharebot, a modern and dynamic company specialized in developing professional and precise 3d printer. Sharebot was born in 2011 in Brianza and its aim is to research and produce additive technologies, becoming one of the main Italian company in the 3d world. Our printers are designed for both professional market and desktop market and they include all the main 3d technologies (filament deposition, polymerization and synterization). At the Expodental Meeting in Rimini, Sharebot and its distributor Deantolica spa, have presented SHAREBOT 3D DLP PRINT PRECISION, a printer dedicated

to dental sector. Sharebot 3D DLP PRINTER PRECISION uses a professional projector for 3d printing, with high resolution and a 450Nm light beam. Thanks to the professional lens and the central projection system which uses the whole optics, it eliminates the aberrations which are present in the common commercial projectors and this guarantees the best quality and precision in the printing process. Sharebot 3D PRINTER PRECISION has been designed for being integrated in each laboratory: the oral scan of the patient, production of 3d model, managing of the

printing process and realization are a unique process, easy and intuitive. The printing process with Sharebot 3D DLP PRINTER PRECISION is fast: you can obtain the model of a bite, dental arch or surgical guides with high resolution and precision in a short time. Using the additive manufacturing, every professionals of the sector can optimize time and production cost, improving its own work in order to offer a better and quicker service to the patient.
